

Investigation Summary Report

Private Residence
Jonesboro, LA

HISTORY

DATE OF INVESTIGATION: June 18th, 2011

PARTICIPANTS: Traci Myers, Keith Myers, James Palmer, Crystal Vines, Bess Maxwell, John Combs

NOTE: The clients in this investigation have requested confidentiality. Some information may have been obscured to honor their request. This in no way affects the data presented, or the conclusions herein.

BACKGROUND

The clients noticed the activity as beginning about the time of the birth of their daughter. The major activity has been electronics items turned off and on, a music box that plays by itself when no one is around, objects being moved from where they are normally kept to places where they normally would not be moved or found, and doors being opened or closed, when no one is around to have done so. Some remodeling, painting and flooring, was done during this time frame. Clients also report a "heavy atmosphere" upon occasion.

EQUIPMENT: Digital cameras; digital audio equipment, various EMF meters including Tri-fields; motion detectors including geophone and laser grid systems; digital thermometers; infrared digital video equipment and IR cameras; Flit thermal camera; ion counters; infrasound testing equipment; Ovilus interactive voice communications device; PEAR REG-1 units for the detection of anomalous human consciousness, with software on Hewlett-Packard computers.

INVESTIGATION

At the times of testing, in the areas tested, no high positive ion counts were noted. No infrasound was detected, with testing specifically including air moving equipment. No high EMF fields, naturally occurring, were found in locations where humans could be expected to be exposed

beyond normal limits and times. These three are major causes of hallucinations that anomalous events are happening. None of these three phenomena were found in the home, at the times of testing, in the areas tested. No anomalies were photographed by still photography or thermal photography. No anomalous video was observed or recorded. Nothing was noted in anomalous motions, or anomalous EMF fields. No unusual hot or cold spots were detected. No personal experiences were encountered. No EVP was recorded.

PART TWO

CONSCIOUSNESS DETECTION

This type of testing is passive in nature, and designed to detect, through the quantum tunneling method, the probability that a human type consciousness may be present affecting the REG-1 units, when all incarnate consciousness has been removed from the areas of testing. The minimum reporting standard for this type testing is $p < .05$, with p , (probability) representing the chance that the event could be the result of chance alone in the probability distribution. Thus, the probability of an anomaly is 95% or greater. All tests that score less than 95% are discarded. We then compute the probability that all of the tests are false, none of the tests indicate an anomaly.

A total of 41 tests were run, in various locations in the home, at various times. At the minimum reporting standard of .05, we could expect to receive 2.05 tests by chance alone, affecting the probability distribution, which would indicate 2.05 tests as false positives. ($41 \times .05 = 2.05$) The actual mean score of the 41 tests was $p < .033767$, as the actual corrected mean score. Therefore, we could expect to receive $41 \times .033767 = 1.38$ tests as false positives. It is noted that we actually received a total of 12 positive tests, much greater than the expected 1.38, by chance, assuming no cause other than chance. After the room designation, the number or alpha character is the designated test number for that room or area. The test scores are as follows:

COMPUTER 1

BabyBR3 $z = 1.658$ $p < .048659$

BabyBR6 $z = 1.840$ $p < .032884$

BabyBR7 $z = 1.962$ $p < .024881$

COMPUTER 2

BedRoomTwo 2 $z = 1.667$ $p < .047757$

BedRomTwo 4 $z = 2.303$ $p < .010639$

BedRoomTwo 5 $z = 1.687$ $p < .048802$

COMPUTER 3

MainBath3 $z = 1.861$ $p < .031372$

COMPUTER 4

MasterBR3 $z = 1.665$ $p < .047956$

MasterBR5 $z = 2.511$ $p < .006019$

COMPUTER 5

Kitchen4 z= 1.676 p< .046869
Laundry1 z= 1.836 p< .033179
Laundry2 z= 1.893 p< .029179

The probability that these 12 tests are all false positives, due to chance alone in the probability distributions, and not indicative of human consciousness interaction when none was present to interact through quantum tunneling is:

PROBABILITY

p< .000000000000000000380686
Another way of expressing this is 3.80686 x 10 to the -19 power.

PART THREE

THE OVILUS

No data was gathered or heard from the Ovilus that could be considered other than random.

CONCLUSION

The amount of personal and observed data gathered, at the times of testing and in the places tested, was minimal. We will also note that the phenomena reported by the client did not seem to be harmful in nature or intent. This was the first investigation made in this home. Many individuals are shy, by nature. It is possible that, as strangers, we were chosen for non-interaction. A second attempt may allow us to be considered guests, as opposed to strangers.

The data from the consciousness testing was strong, with twelve positives obtained. This is passive in nature, and difficult to explain without an actual presence, at the times of testing and in the places tested. The presence, with a chosen stance of non-interaction, supports the events of the evening. We would like to thank the clients for allowing us to be guests in their home, and for the opportunity to perform research there. We hope we may return, in order to further research efforts for this home, as well as adding to our store of knowledge and experience for all clients. We also thank the clients for their most gracious hospitality.

John Combs
