

Investigation Summary Report

Private Residence Minden, LA

HISTORY

PRIVATE RESIDENCE
MINDEN, LA.

DATE OF INVESTIGATION: February 5, 2011

PARTICIPANTS: James Palmer, Keith Myers, Traci Myers, Kirk Cormier, Bess Maxwell, John Combs

NOTE: The clients in this investigation have requested confidentiality. Some information may have been obscured to honor their request. This in no way affects the data presented, or any conclusions herein.

BACKGROUND

Clients have lived in this home several years. They do not own the home or land. The clients began to experience problems immediately after moving in, even though there were almost no arguments or tensions in prior years. The clients' son committed suicide at age twelve, showing no prior signs of depression, or other clinical signs consistent with suicidal thoughts or tendencies. This was done by shotgun blast into his mouth. This home is in a rural setting, and there are only 6 to 8 residences on the entire road. There have been numerous deaths of children on this road, dating back to about 1900. Between 1900 to 1915, there were 6 known deaths of children, all under age 13. In the immediate last few years, 5 more have died, 4 by accidental death, and 1 by suicide. One elderly gentleman, son of the current owner of the land, committed suicide by shotgun blast to the mouth, in the mid 1980's. The clients have experienced appliances and televisions being turned on and off, with the television being turned on virtually every night, in the early morning hours, in the bedroom of the child who committed suicide. This nightly event started about 3 months prior to his death. Voices have been heard in the home, including that of the deceased child. Low growls have been heard in the living room area. The clients have experienced the impression of being touched by unseen hands. The bedroom that the child occupied now has noises during the night, too loud to be settling of the home, and

consistent with objects being moved around. Noises consistent with someone tapping a cane on the wooden bed are heard, this tapping being a habit of the child. These noises have been recorded by the client, as well as EVP identified by family members and friends, as the voice of the deceased child. A family friend of the clients stayed with them recently. When the client went to open the child's bedroom door, she found it locked. The friend, blind, remained by the door while the client went to get the key. As the family friend turned the knob, and tried to open the door, the handle was turned from the inside, and the door opened inward. The client returned just in time to see the door open, and the friend relate that she had her hand on the knob when it was turned from the inside. Shortly before his death, the child took on the mannerisms of an old man. He started collecting walking canes, and old hats from prior times, with fishing lures in these hats. He began to walk in a different, more stooped fashion, while pretending to hold a shotgun at waist level, and saying, "Git off my property". These mannerisms were not part of his history until just prior to his death. The child purchased and downloaded from the internet, a telephone answering message, then transferred it to the family phone. It says, "Please leave a message. BOOM". The boom is a blast from a shotgun. The child committed suicide in the master bathroom. Several small child relatives, not knowing of the suicide in this bathroom, will not use this bathroom, or if bathed in there, refuse to remain alone. They have no qualms with the main bathroom.

Behind the clients' home is a small cemetery, containing at least the 6 graves of children under age 13, dates of death 1900 to 1915. This cemetery is completely overgrown, and the actual number of those buried there is not known. It is in a now heavily wooded area, with underbrush, making it difficult to find or see even the graves with grave markers that do remain. Near this is a small pond, but approximately 24 feet deep. An apparition of a female, dressed in clothing of the by-gone era, has been seen leaving the area of the cemetery, walking through the pasture near the pond. An apparition of a small male child is reported by the pond, and is reported to have spoken to those at the pond. The clients have made an attempt at having a formal clearance of this home by a Catholic priest. The clients are Catholic, and indicate the ritual was cut short, and not properly performed. The priest later advised the aunt of the client that he was frightened by the atmosphere of the home immediately upon entering, and did not wish to remain there, even for the time it would take to perform the ritual properly. Through the aunt, he advised the clients to move. Current visitors and family members report that the child's bedroom is still heavy in atmosphere. The home is also noted to have many incidences of hot and cold spots, where they can not be explained by natural means.

EQUIPMENT: Digital cameras, Digital audio recorders, Various EMF meters including Tri-Fields, Motion Detectors, Ion Counters, Digital thermometers, Infrasound detection equipment, and PEAR REG-1 units for the detection of anomalous human consciousness with software on Hewlett Packard computers.

INVESTIGATION

At the time of investigation, in the areas tested, no anomalous still photos, anomalous video, or anomalous motion was noted. No infrasound or high positive ion counts were detected. Temperature extremes, due to weather conditions, were not able to be reliably checked. No EVP voices were recorded. However, the deceased child, just prior to his death, had a habit of while lying in his bed, he would tap one of the wooden canes he collected on the wood of the bed. This noise has been noted several times since his death, at various times, in his bedroom. On the night of the investigation, this noise was noted by both investigators Kirk Cormier and James Palmer. This noise is different and distinct from wood popping, cracking, or settling of the house itself. It

was digitally recorded, although we cannot say its exact source, no source was noted in the room at the time of the tapping, that the noise could be naturally attributed to. Just as the investigation began, I, John Combs, entered the above bedroom, with a Tri- Field natural EMF meter in hand. About two feet inside the door, a five to six second series of quick EMF spikes were noted, with no natural cause near enough to cause the rapid spikes, and the event could not be duplicated, checking throughout the night.

At about 9:00 PM, in the above bedroom, a Hewlett-Packard computer with a voice dictation program, was set up in the bedroom, otherwise unoccupied and observed on insure an empty room and no voices that could be recorded by the dictation program. After about 15 minutes, the computer was checked, and the following message had been recorded: "Will at that go up. But I will to the". The message had to physical cause to be printed, that could be observed or heard during the 15 minute run. It is noted that the content of the message is vague, as well as incomplete, and has no value in its actual substance, except as an anomaly in its origin. The computer that this message was recorded on was later set up to charge at my home later in the evening, and a computer printer hooked up. All performed normally. The next morning, I worked on this computer for about two hours, mostly performing research and returning mail. I never called up the dictation program, Microsoft Works where the program was recorded, or accessed documents, where the data was stored. At about 10:00 AM that morning, the computer printer came on, and the above Minden message was printed, without any program called up, or having to be shutdown, after printing. The message was printed as I was composing an e-mail. There is no known reason for the message to have been either called up or printed, nor has any subsequently been found.

CONSCIOUSNESS DETECTION - PEAR REG-1 UNITS

This testing is passive in nature and designed to detect through quantum tunneling, the probability that a human type consciousness may be present affecting the REG- 1 units, when all incarnate consciousness has been removed from the areas of testing. The minimum reporting standard for this type of testing is $p < .05$, with the .05 being the probability that the event could be the result due to chance alone in the probability distribution. A total of 31 tests were run. At the minimum reporting standard of .05, we could expect to receive 1.55 false positive tests, due to chance. The mean score of the 13 positive tests actually received was $p < .031054$, for a corrected expectation of .96 tests as false positive. The 13 tests received greatly exceeded the expected chance score of 1 test, as a false positive. The tests and scores were as follows:

Washroom5 $z = 2.254$ $p < .012098$
Washroom7 $z = 2.470$ $p < .006756$
MasterBR1 $z = 1.933$ $p < .026618$
MasterBR3 $z = 2.116$ $p < .017172$
MainBath1 $z = 1.777$ $p < .037784$
BR2testC $z = 1.693$ $p < .045228$
LivingRoom1 $z = 1.710$ $p < .043633$
LiningRoom2 $z = 1.733$ $p < .041548$
BedRoom1testE $z = 1.657$ $p < .04876$
BedRoom1testF $z = 1.728$ $p < .041994$
MasterBath1 $z = 2.033$ $p < .021026$
MasterBath2 $z = 2.116$ $p < .017172$
MasterBath3 $z = 1.707$ $p < .043911$

The probability that these thirteen tests are all false positives, due to chance alone, and not indicative of human consciousness interaction when none incarnate was present to interact through quantum tunneling is:

$P < .000000000000000000000000037574$

It is also noted that testing began about 7:00 PM, in empty rooms, with no one present. However, during this early time, activity by team members is generally higher than later in the evening. We are noting when human activity is higher, the number of positive tests generally is lower, rather than the opposite as might be expected if the positive test activity were due indeed to team members, as opposed to an anomalous consciousness. Testing began at about 7:00 PM. Three computers and REG-1 units were involved. C-2 received it first positive at 8:32 PM, C-1 at 8:51PM, and C-4 at 9:10 PM, all significantly after the activity by human investigators had quieted. It is also noted that, although the home was quite thoroughly tested in all areas, almost all positive tests came from areas of client reported activity, and almost no positives were received from areas reporting no activity. We look forward to performing research in this home again, and to testing some other reported areas of activity in outdoor areas, and hope we may be able to answer more of the clients' concerns and questions. We would like to thank the clients for this opportunity to perform research, and for their most gracious hospitality.
